

Security Enclosures

GCS Acoustics manufacture and erect steel security enclosures to house dangerous or volatile equipment.

A robust Duragal frame sheathed with Galvanised perforated sheet panels or expanded mesh ensure these units are impervious to the general public and site personnel.

Various surface finishes are available but we recommend that the perforated panels be powder coated to ensure long life and durability to the weather.

The doors are provided with standard shoot bolt hardware for the provision of pad locks. Heavy duty hinges are welded to the main frame to prevent tampering or removal.

All security enclosures can be custom designed to suit the size of the equipment and the location of the equipment.

For further advise on these products please contact GCS Acoustics Pty Ltd.
